SUMMARY

Technology professional with 6+ years of experience spanning enterprise networking and backend engineering, including 4+ years building scalable microservices and distributed systems in regulated Banking and FinTech environments.

Focused on implementing DevOps and DevSecOps practices across CI/CD-driven deployment pipelines, Infrastructure as Code (IaC), containerized workloads, and AWS-based secure cloud architecture. Strong exposure to cloud security, IAM-based least privilege access design, governance & compliance controls, and secure SDLC practices aligned with production reliability requirements.

Long-term oriented toward DevSecOps leadership, embedding security, automation, and infrastructure resilience into modern financial systems.

EXPERIENCE

DevOps AI Engineer | OnFinance AI *Jan 2026 – Feb 2026*

- Designed and enforced IAM policy segmentation to implement least-privilege access controls across Platform Engineers, Developers, and Cloud Administrators.
- Implemented organization-wide 2FA across Google Workspace, GitHub, Slack, and Zoho Finance, improving identity security across all operational access planes.
- Identified and mitigated critical cloud attack surfaces across AWS environments, strengthening organizational security posture. Enhanced cloud governance by restructuring access patterns and strengthening multi-layer authentication mechanisms.
- Collaborated with developers to optimize containerized AI workloads for improved deployment efficiency and reliability
- Contributed to migration from LiteLLM to BiFrost LLM Gateway to improve performance efficiency, usage governance, and operational reliability of AI-driven services.
- Collaborated in a fast-paced startup environment requiring rapid cloud configuration, security implementation, and operational decision-making.

DevOps Engineer | Servion Global Solutions *Oct 2021 – Jan 2026*

- Contributed to enterprise-scale core banking transformation (Oracle Flexcube to Temenos T24), delivering integration solutions in regulated environments.
- Led end-to-end design and development of a new IVR application for Dubai Islamic Bank's Technology Happiness Center using Genesys Composer.
- Authored Functional Specification Documents (FSD) and Technical Design Documents (TDD), defining system architecture, integration flows, and implementation strategy for IVR modernization.
- Designed and developed REST APIs from scratch to integrate IVR systems with external platforms including Azure Active Directory and BMC Helix, enabling identity validation and automated ticketing workflows.
- Designed, developed, and integrated REST APIs enabling seamless communication between distributed systems and middleware layers (northbound/southbound integrations).
- Re-engineered legacy APIs and interfaces into scalable API-driven solutions, improving system performance, reducing memory consumption, and enhancing reliability.
- Built and maintained Kafka-based event-driven systems, enabling asynchronous communication across missioncritical applications and improving scalability and throughput.
- Led application enhancements and change requests for Java/Spring Boot microservices, ensuring stability across multiple release cycles.
- Coordinated deployments across development and UAT environments, aligning application readiness with infrastructure and operational standards.
- Implemented Git-based version control strategies (Bitbucket), enabling structured branching, release traceability, and secure

SDLC practices.

- Designed and implemented Jenkins-based CI/CD pipelines (PoC), reducing deployment lead time by ~40% and improving release automation.
- Collaborated with cross-functional teams to define API contracts, integration patterns, and deployment strategies ensuring system reliability and performance.
- Troubleshot integration and deployment issues across environments, ensuring high availability and production stability.

Site Reliability Engineer – Networking | Tejas Networks *Nov 2019 – Oct 2021*

- Delivered telecom infrastructure modernization and reliability engineering across multi-ISP environments, supporting large-scale network transformation programs.
- Led telecom network modernization initiatives, including SDH to OTN upgrades for TCL's Southern Network Ring, improving bandwidth efficiency, fault tolerance, and network scalability.
- Executed large-scale SDH network upgrades (SDHv4 to SDHv6) for multiple service providers including Bharti Airtel and Tata Communications, enabling advanced services and improved network manageability.
- Supported and maintained telecom infrastructure across major ISPs including Bharti Airtel, BSNL, Reliance Jio, Vodafone Idea, RailTel, and PGCIL, ensuring high availability and SLA compliance.
- Worked extensively with telecom and network systems including SDH, DWDM, OTN, ONT/OLT, OSPF, NMS, and EMS, contributing to network design, configuration, and optimization.
- Managed and administered RedHat-based server environments on proprietary telecom systems, ensuring secure, stable, and reliable operations.
- Designed and implemented failover mechanisms and redundancy strategies, improving system resilience during maintenance and upgrades.
- Monitored network performance using NMS/EMS tools, enabling proactive incident detection, troubleshooting, and resolution.
- Automated operational workflows using scripting for configuration management, patching, and routine maintenance, reducing manual effort and operational errors.

EDUCATION

Anna University *2015 – 2019*

Bachelor of Engineering (B.E.), Computer Science and Engineering

Relevant Focus Areas: Data Structures, Operating Systems, Computer Networks, Distributed Systems, Database Systems

G. K. Shetty Vivekananda Vidyalaya Junior College *2001 – 2015*

High School Degree • Computer Science

SKILLS

Backend & Integration Systems

Java, Python, Spring Boot, REST APIs, Kafka, Microservices Architecture, API Integration

Cloud & Platform

AWS (IAM, EC2, S3), Microsoft Azure, Kubernetes, Docker, Linux

CI/CD & Automation

Jenkins, Git, Bitbucket, OpenTofu (Terraform), Shell Scripting, Pipeline Automation

DevSecOps & Governance

IAM Policy Design, Least Privilege Access, Role-Based Access Control (RBAC), Secure SDLC, Infrastructure as Code (IaC), Cloud Security, Governance & Compliance

Observability & Monitoring

Prometheus, Grafana, OpenTelemetry, Log Analysis, Release Traceability, Production Stability Support

LICENSES & CERTIFICATIONS

Amazon Web Services

Cloud Practitioner • AI Practitioner

Google

Cloud Computing Foundations

Microsoft

Azure Fundamentals • Data Fundamentals • Security, Compliance, and Identity Fundamentals • Power Platform Fundamentals • Azure AI Fundamentals

KodeKloud

12 Factor App • DevOps Pre-Requisite Course • Fundamentals of DevOps • Learning Linux Basics • Learning Shell Scripts

HONORS & AWARDS

Customer Delight Award – Servion Global Solutions

Recognized for outstanding performance in Project delivery and support activities for Contact Center at Dubai Islamic Bank during FY'24 – Q1.

Best Partner Support Engineer - Tejas Networks / Bharti Airtel

Recognized for outstanding operational support and reliability performance.
